HeatSeeker® Thermal Imagers

Troubleshoot and identify potential problems before they happen with the **IDEAL HeatSeeker® Thermal Imagers**. What makes HeatSeeker® so useful are the dual cursors that instantly locate the hottest and coldest temperatures on a live screen, and the camera's ability to blend a thermal image on top of a digital image for easy on-the-job decision making. The HeatSeeker® Thermal Imager's easy set-up and operation make it a cost-effective tool for electrical service, industrial maintenance, building inspection and data center evaluation.

Adjustable Blended View for Ease of Use

The HeatSeeker® captures both a full infrared image and a digital photo. The thermal image can be overlaid on top of the digital image in various % blends for clarity.

HeatSeeker® provides real-time analysis and is ideal for:

Electrical Safety

- Identifies overloaded circuits, loose/corroded connections and failing breakers in electrical panels
- Identifies blown fuses, overloads, phase imbalance and harmonics problems
- Identifies hot spots from high resistance connections

Energy Efficiency

- Identifies inefficient heating and cooling transfer
- Identifies draft sources from missing insulation in rafters/walls/floors
- Identification of problem areas helps reduce heat gain/loss and carbon footprint

Building Maintenance

- Discovers sources of moisture in roofs and areas behind walls
- Checks air distribution for blockages in pipes, damaged duct work and insulation gaps
- Checks fluid distribution for stuck valves and burst pipes

Preventive Maintenance

- Identifies equipment efficiencies/inefficiencies
- Applications include motors, pumps, boilers, radiators, heaters, chillers and transformers

Data Center Thermal Mapping

- Cooling Systems and Heat Generating Equipment
- Electrical Switchgear
- Motors and Motor Controls
- HVAC Equipment
- Uninterruptible Power Supplies (UPS)
- Automatic Transfer Switches (ATS)
- Power Distribution Units (PDU)
- Batteries
- Electrical Devices that Feed the Server Systems
